Extra Equipment

Front-Harrow

Suitable whether extra tillage, crust breaking or loosening of the soil is needed to achieve

Edge Equipment

the working width, edge equipment can be mounted on all Spring-Boards and Front-

Slicing Plates

Cuts and breaks the soil and clods much more effectively than the standard points

Easy-Change

Easy-Change kit for quick change between normal plate on Spring-Board and crust breaker tip. Mounting on standard tine.

Transv. Lock. System

The levelling effect of the Spring-Board is increased by locking the tines together, making it one complete "board". Easy to mount / dismount tine by tine.

Warning Boards

Detachable warning boards for safer driving.

Front-Pakker

Cuts its way through the clods and consolidates on heavy or light soil

Sharp 30° Front-Pakker rings give an excellent cutting action whilst having the weight to consolidate in front of a powered or passive drill combination.

The 150mm to 165mm spacing between rings ensures there is some friable soil left for the drill to work. Whichever size of packing ring you choose to suit your land, they all employ a unique shoulder design which prevents the rings from sinking in too much on light land and still allows the aggressive 30 degree edge to do its work on heavier ground.

Front-Pakkers are available as 1.50 - 4.00 m rigid models or as 4.00 - 6.00 m hydraulic folding models.

All Front-Pakkers incorporate a

cleaning chain between the rings to ensure the ring keeps working in wet sticky conditions.

700, 800, 900 mm rings

HE-VA Front-Pakker comes in a choice of 3 ring sizes or a combination of 2 different ring sizes for the maximum effect.

The 700 mm and 800 mm rings give good allround pressing on light, medium and heavy soils and yet have a low rolling resistance due to their weight to diameter ratio and the shoulder profile.

900 mm ultra heavy-duty rings are designed to crack, fissure and break down even the heaviest ground or give extra consolidation in light land.

Multi-ring combinations give you full width action with increased consolidation between the tractor wheels, so that when the tractor tyres have pressed the land, it is left evenly consolidated right across the width, presenting the drill with a more even seedbed and resulting in better crop establishment.

Shoulder Profile

HE-VAs unique shoulder profile offers superb cutting action with its 30° edge whilst at the same time controlling the

penetration with the shoulder at the base of the cutting edge.

Full Width Levelling

4,00 m Spring-Board for 1.65 m Front-Pakker has as standard mechanical change-over into a transport width of 2.85 m.

By mounting a 2.60, 3.00, 3.50 or 4.00 m Spring-Board on a 1.50 / 1.65 m Front-Pakker, it allows the whole width to be levelled and cultivated whilst the Front-Pakker presses in between the tractor wheels, and the tractor wheels/twin wheels press the rest of the working width.

On all front equipment you get...

Cat. II three point linkage with integrated steering.

STEERING

With the integrated steering, the Front-Pakker is actually trailed rather than pushed - ensuring that it follows the nose of the tractor steering smoothly even at speed.

The steering rollers (pictured below) self-centre the press to prevent it swaying around when lifted to turn on the headland or in transport.

HEAVY DUTY HEADSTOCK

As with all HE-VA Front Equipment, the headstock is designed to cope with the heaviest ring combination and attachment of a front harrow or a Spring-Board.

BUSHES

To increase the service life of the Front Equipment, It is equipped with bushes for pins, locked by the ring split.

Press-Roller

Where a precisely uniform consolidation between the tractor's tyres and either side of the tractor wheels is requested, the Press-Roller with rubber wheels will be the ideal solution. The 4.00 m model is equipped with a wheel on both sides consolidating the soil outside the area where the tractor's wheels and/or twin wheels will consolidate.

Press-Roller is a self-governing wheel packer where the wheels are mounted on a 60 mm axle.

Can be equipped with weight console set for additional weight. The Press-Roller is available with Spring-Board, Front-harrow etc.

Work Width, m	Transport Width, m	Wheel Diameter, mm	Number of Wheels	Weight, kg
1.50	1.70	760	4	470
4.00	4.15	760	1+4+1	705
4.00	2.65	760	1+4+1	795

Extra Equipment

Spring-Board and Front-Harrow

For extra cultivation, levelling and consolidation add the Spring- Board or the Front-Harrow and you will save work, time and money.

All machines that incorporate a Spring-Board have hydraulic adjustment of the working depth, so that the aggressiveness can be adjusted on the move or the Spring-Board lifted out of work completely if the conditions dictate.
