Front-Board

Light Weight Front-Press

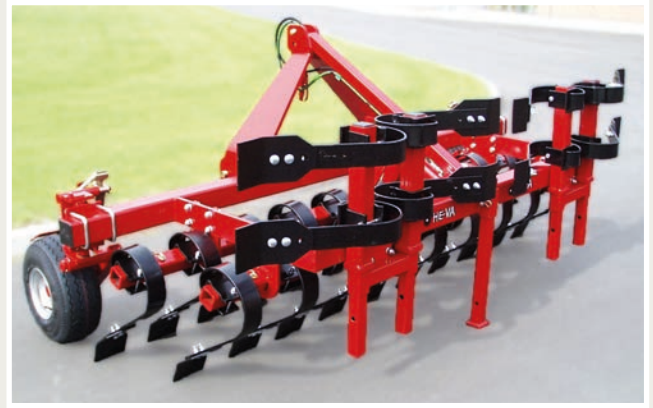

HE-VA

Effective Light-Weight Front-Press

HE-VA Front is a front-press primarily for use in combination with drills that are operating at high speed. Front-Board is better suited for these tasks due to its light weight and the fact that a high speed can be maintained.

This front-press prepares the soil efficiently. With its two rows of Spring-Board tines, it can effectively process the soil before the drill and the 2 large depth wheels are used to set the working depth. The placement of the wheels ensure a more steady operation as the wheels run on the already processed and level soil.
