## **EC DECLARATION OF CONFORMITY**

in accordance with the EU Machinery Directive 2006/42/EC  
applicable as from December 29<sup>th</sup> 2009:

HE-VA ApS  
N. A. Christensensvej 34  
DK-7900 Nykøbing Mors

hereby confirms that the following machine has been manufactured in accordance with the Council  
Directive 2006/42/EC.

The declaration comprises the following machine:

Tip – Roller 4,5m – 5,4m – 6,3m

Nykøbing the 29th December 2009

A handwritten signature in black ink, appearing to read 'Villy Christiansen', is written over a horizontal line. The signature is fluid and cursive.

Villy Christiansen

The undersigned is furthermore authorised to compile technical documentation for the above machine.

## **Description of the machine**

The Tip-Roller is a 3-sectioned hydraulic, wheel mounted roller. Tip-Roller is to be used for packing the top soil, to maintain the content of moisture in it, and to eliminate not solid stones from the surface of the cultivated area.

The roller sections has an independent suspension. Side sections are center-mounted in an intermediate joint, connecting the side sections to the wheel frame, which gives the sections a perfect adaption to the ground in uneven areas. The changing between transport- and work position is by hydraulic force. The roller has a low and compact transport position with a width of 2,2 or 2,42 meters.

**Read the manual before operating the roller and strictly follow the safety instructions.**

## **Delivery Check**

Check the roller for any damages. Check the hydraulic hoses for cuts and squeezing damages. Check also the other hydraulic components, are not damaged during transport. Check that the frame construction has not been damaged. You should also check that the roller blocks have not been exposed to impacts, which may have damaged the cast roller rings or the double-sealed ball bearings.

*Finally check that the transport wheels are tightened and OK.*

*Check the air pressure in the tyres according to Technical Specifications chart next page*

## **Instructions for unloading and final assembly**

In order to minimize the roller's space during transport, the roller is supplied partially separated from the factory. If the machine is delivered unassembled, it must therefore be completely installed first.

### **Transport Brackets**

At delivery the machine is mounted with brackets for hoisting gear, which is not painted.

These brackets is for attachment of chains or straps, when loading or unloading the machine from the transport vehicle, and they must be dismantled before use.

## Specifications

3-section hydraulic wheel-mounted field roller with free movement in all sections. The roller is delivered with a working width of 4,5 - 5,4 - 6,3 meters, respectively, with 6 different ring types: cambridge- camstar- 2D wave- cross-kill ring and rigid roller.

### Technical specifications

Work width m.	4,5	5,4	6,3
Width in workposition m.	4,75	5,64	6,55
Length m.	4,0	4,0	4,95
Transport width m.	2,2	2,2	2,42
Transport hight m. w / without add.equipment	1,62/2,44	1,62/2,44	1,72 / 2,54
Weight kg basic machine depending on ring type	1.510 - 2.810	1.880 - 3.240	2.110 - 4.190
Wheel size	10.0/75x15,3 - 10 PLY	11.5/80x15.3 – 14 PLY	400/60x15,5 - 16 PLY
Max tyre pressure bar/psi	3,9/57	4,7/68	4,3/62
Oil pressure	min. 150 bar		
Hydraulic outlets	2 pc double function		
Quick couplings, standard	Sterling type E 402		
Hydraulic oil	Hydro Texaco HD32, Specification DIN 51524-3 / ISO 11158 L-HV		

## Operating Instructions

### Attachment

On delivery the roller is in transport position. When the roller is attached, check that the towing hook height is 500-600 mm. Reverse the tractor, put in and **secure** the draw bolt.

Attention: Check that the towing eye fits the height of the tractors drawbar

Raise the support leg and place it in the transport fittings on top of the drawbar. Now fit the four hydraulic hoses.

The hoses for the tip cylinder are provided with **red** tie strap.

The hoses for the wing cylinder are provided with **blue** tie strap.

**Important:**

Check that the male end mounted by the factory fits the female end of the quick couplings of the tractor.  
 Now pressurise the tip cylinder (red) so that the side sections are tipped free of the transport fittings.  
 Then the wing cylinder (blue) is pressured so that the wings are turned as much back as possible.  
 Now relieve the pressure on the tip cylinder, and the roller will tip forward down to working position. When the bottom has been reached, let go of the hydraulic handle and the roller is ready for use.

**Transport**

At change-over for transport, the roller is tipped totally backward by pressurising the tip cylinder. Now pressurise the wing cylinder so that the side sections turn forward, towards the stop on the transport fittings of the drawbar.  
 When both sides lie in parallel with the drawbar, they are lowered down into the transport fittings by unpressurising the tip cylinder. Then relieve the pressure on all hydraulic hoses, and the roller is ready for transport.

**INSTRUCTIONS FOR TRANSPORT AT PUBLIC ROADS:**

Before transport at public roads, make sure that the attachment of the implement to the tractor, is in accordance with the local rules and regulations in force (permitted total weight, permitted axel load, transport width, lights and warning signs).

**FRONT AXEL LOAD:**

When the implement is attached and at maximum load, the tractors driving properties must be ensured. Check that the front axel is sufficiently loaded. The front axel load must be at least 20% of the tractors weight. Permitted axel load and total weight for the tractor must be respected.

**NB! The driving, controlling and braking properties are affected by the attached implement**

### When rolling

Speed: max. 10 km/h.

When turning, drive in wide curves as far as possible. The turning should be performed no sharper, than all roller rings are still rotating forward.

Only lower the wheels when making ready for transport position.

Do not drive over any large stones, which are not moveable.

## Maintenance

- A. After approx. 10 hours of operation, retighten the wheels, ball bearings and stop rings. Check hoses, fittings and cylinders for any leaks and retighten.

Maximum torque according to ISO 898-1 in Nm. <b>With lubricated thread</b>			
Metric thread	Quality 8.8	Quality 10.9	Quality 12.9
M10x1,5	38	54	63
M12x1,75	66	95	110
M14x2,0	105	150	176
M16x2,0	164	235	274
M18x2,5	233	323	377
M20x2,5	331	458	535
M22x2,5	450	622	727
M24x3,0	572	791	925
Wheel nut M18x1,5 fine thread		360 Nm	
Wheel nut M22x1,5 fine thread		550 Nm	

### **Control tightening:**

- flange for towing eye, 6 bolts M16 in quality 10.9
- flanges between drawbar and the rear drawbar 6 or 12 bolts M16 in quality 10.9

- B. After every approx. 10 hours of operation, lubricate all movable parts in the side sections as well as the three lubrication points of the wing cylinder. After every 30 hours of operation, lubricate the tip cylinder pin and the three pins in the drawbar.
- C. After the season, lubricate the roller with grease and oil. Lubricate the piston rods with grease or conservation oil.

**Lubrication chart**

 <p>All ends on roller blocks, twice each season and after wash</p>	 <p>2 nipples on wings pivot joints 10 hours</p>
 <p>1 nipple on folding cylinder 2 pc on pin for wings 10 hours</p>	 <p>Rod end of tip cylinder 30 hours</p>
 <p>Cylinder end of tip cylinder 30 hours</p>	 <p>3 nipples on pivot joint between rear drawbar and wheel frame 30 hours</p>
 <p>1 nipple on each Spring-Board cylinder 10 hours</p>	 <p>2 nipples at track eradicator cylinder 10 hours</p>

## Safety for Tip-Roller

Do not operate the machine, **if any people<sup>1</sup>** are at risk in **the dangerous area.<sup>2</sup>**

When persons are at risk in the dangerous area (e.g., when doing adjustments, maintenance or connect or disconnecting), the following points must be met:

- Lower the machine on solid ground.
- Hydraulic must be relieved.
- Tractor must be turned off, and the key removed.
- Driver must be aware of, when operating that there are no persons at risk in the dangerous area.
- He-Va cannot be held responsible for any falling accidents due to washing lubrication and other maintenance tasks
- By the time tires will become tender and explosion danger can occur, when transporting or when controlling tire pressure
- Drive carefully when going from road to paddock and opposite. Be aware of ditches along the road and holes in dirt roads because gravity point is reasonable high in transport position. Especially when additional equipment is mounted
- The machine must not be operated by persons who have not been properly instructed or trained

Most accidents when operating the machine, transporting, and doing maintenance occurs, when avoiding the simplest safety regulations.

For this reason, it is of highest importance, that any person who is operating the machine, strictly follows the safety regulations and other instructions, which belongs the machine.

The machine must only be operated, maintained, and fixed by persons, who is confidential with and skilled for this work and is aware of moments of danger, which can occur.

**ATTENTION!!** Rotating parts and loose in a loose condition, is a dangerous combination.

**IMPORTANT!!** It is strictly prohibited for any person to take place on the frame of the machine, when it is either operating or the tractor is idling.

---

<sup>1</sup> People at risk: Any person, who is completely or partially in the dangerous area.

<sup>2</sup> Dangerous area: At the machine and underneath it, and in distance of 4 m from it.

## **Safety Instructions, regarding Hydraulic System**

1. The highest allowable pressure is 225 bar.
2. It is recommended to mark the hydraulic connections between the implement and tractor, to avoid incorrect operation!
3. When checking for hydraulic leaks, suitable safety gear must be used due to danger. (Safety goggles , gloves, etc.)  
At high pressure, Hydraulic oil can penetrate the skin and cause serious injuries.  
At injuries, consult a doctor immediately. **RISK OF INFECTION!**
4. Before any work at the hydraulic system, the implement must be lowered to solid ground.  
Pressure must be relieved, engine stopped, and ignition key removed.
5. Check the hydraulic hoses on a regular basis, however, every six months as a minimum due to any cracks, wear and tear, etc. Replace any defective hoses immediately.
6. Hydraulic hoses last for no more than 5 years.  
New hydraulic hoses must be identical to the manufacturer's specifications.

## **Disposal**

When, after many years of use, the machine is to be regarded as end-of-life, it must be disposed of to a registered and approved product dealer. This will carry out the statutory discharge and disposal of hydraulic oil, as well as sorting materials for further processing for recycling.

## Markings on the machine

Several markings are located at your machine, which contains **safety regulations** and other instructions to inform about correct operating.

Please read these instructions carefully and make the driver aware about the markings and **safety regulations** in this Operating Instructions. Keep the markings clean and readable. If they are not, they must be replaced.

### Safety – and other markings on the machine

Study the Operating Instructions thoroughly before any operation of the machine and observe all safety instructions.

Take care that no persons are within the machine's hazardous area during the unfolding and folding procedure.

Plate with number and year of manufacture.

Identification marks for the hydraulic system:

- Red:** Tip cylinder
- Blue:** Folding cylinder
- Green:** Additional equipment

Tighten up the bolts regularly. If this is not performed, our warranty obligations will no longer apply.

## Spring-Board

The Spring-Board requires a double-acting oil outlet on the tractor. The tine angle is hydraulically controlled from the driver's cap, with manual depth control. The tines work independently of each other, but can be coupled together by means of a transverse locking fittings (accessories), if a greater levelling output is required. The replacement is done easily and without use of any tools.

### Installation of Cylinder on the Spring-Board

The hydraulic cylinders are installed as shown below. It is important that they are installed correctly in order to achieve the proper force of the cylinders.

The ring type determines whether the cylinders must be installed in hole 1 or hole 2. If the machine is with 450 or 550 mm rings, the cylinders must be installed in hole 1 and hole 1a or 1b. If the machine is with 620 mm rings, the cylinders must be installed in hole 2 and hole 2a or 2b.
