EC DECLARATION OF CONFORMITY

in accordance with the EU Machinery Directive 2006/42/EC
applicable as from December 29th 2009:

HE-VA ApS
N. A. Christensensvej 34,
DK-7900 Nykøbing Mors

hereby confirms that the following machine has been manufactured in accordance with the Council Directive 2006/42/EC.

The declaration comprises the following machine:

Sub-Tiller 2.5m – 3.0m – 3.5m – 4.0m (rigid)
Sub-Tiller 4.0m – 5.0m (hydraulic)

Nykøbing 01.06.2010

Villy Christiansen

The undersigned is furthermore authorised to compile technical documentation for the above machine.

Delivery check

Upon delivery to the dealer/supplier as well as to the customer, check the Sub-Tiller for possible damages.

Machine Description

Range of Application

The Sub-Tiller is a sub-soiler for soil loosening from 0 cm to 60 cm depth. The work is preformed either before seeding (min. tillage) or after harvest where a loosening of the tramlines in the field is desirable in order to discourage structure damages. Infinitely variable tine spacing, depending on the actual working task. The Sub-Tiller is ideal for all soil types and a V-profile roller is recommendable for moist and sticky soil types while a square tube roller is recommendable for lighter soil types. The Sub-Tiller can be mounted with HE-VA Multi-Seeder which opens up the possibility of till-seeding of rape or crops for green manure. The Sub-Tiller is mounted in the tractor's three-point suspension, and the hydraulic depth control via the packer roller is controlled by the hydraulic system of the tractor. In order to achieve optimum control you have to be aware of the tractor wheels, und under certain circumstances a mounting of twin wheels is recommendable.

Technical specifications

Model	Rigid models				Hydraulic models	
	2.5 m	3.0 m	3.5 m	4.0 m	4.0 m	5.0 m
Working width	2.5 m	3.0 m	3.5 m	4.0 m	4.0 m	5.0 m
Height folded					2.6 m	3.0 m
Power requirement HP	60-200	60-200	140-280	200-280	200-280	200-360
Requirement for number of double acting oil outlets	1	1	1	1	2	2
No. of tines	2-3pcs.	2-3-5pcs.	5-7 pcs.	7 pcs.	7 pcs.	7-9 pcs.
Weight:						
Square tube roller and Quick-Push shear bolt	985 kg	1230 kg	1480 kg	1560 kg	1910 kg	2240 kg
Square tube roller and hydraulic automatic release system	1090kg	1410 kg	1720 kg	1640 kg	1990 kg	2390 kg
V-profile roller and Quick-Push shear bolt	1500kg	1850 kg	2200 kg	2380 kg	2730 kg	3260 kg
V-profile roller and hydraulic automatic release system	1605kg	2025 kg	2440 kg	2620 kg	2970 kg	3690 kg
Synchronous roller and Quick-Push shear bolt	1205kg	1475 kg	1850 kg	1905 kg	2255 kg	2680 kg
Synchronous roller and hydr. automatic release system	1310kg	1650 kg	2090 kg	2145 kg	2495 kg	3110 kg

Sub-Tiller complies with DS/ISO 11001-1, three-point suspension.

Safety instructions for Sub-Tiller

Do not start-up the machine if there are persons in exposed positions* within a hazardous area**.

When persons are in exposed positions (e.g. in connection with adjustment, maintenance, attachment and uncoupling), the following conditions must be observed:

1. The machine must be lowered to firm ground.
2. The hydraulics must be relieved.
3. The tractor must be stopped and the key removed from the ignition switch.
4. The driver must ensure that no persons are staying in exposed positions during the operation.

* Person in exposed position: Any person who is staying wholly or partly within a hazardous area.

** Hazardous area: On and under the machine within a distance of 4 m from the machine.

Most accidents that happen in connection with the operation, transport and maintenance of machines are caused by non-compliance with the most elementary safety conditions.

Therefore it is vital that anybody working at the machine carefully complies with the safety instructions as well as other instructions applying to the machine.

The machine may only be operated, maintained and repaired by persons, who are familiar with this work and who are further familiar with the possible elements of danger with this particular machine.

ATTENTION !!

Rotary parts and loose clothes are a dangerous combination.

IMPORTANT !!

In connection with the risk of parts falling down, it may endanger the lives of persons staying on the base frame of the machine, when it is operated attached to a tractor.

Safety and Instructions on Hydraulics

1. The maximum working pressure is 225 bar.
2. It is advisable to label the attachment parts at hydraulic connections between the tractor and the tool in order to eliminate incorrect operation!
3. When checking for hydraulic leaks, use suitable safety wear (eye protectors, gloves, etc.).
High-pressure hydraulic oil may penetrate the skin and cause dangerous injuries.
In case of injury, consult a doctor immediately. **RISK OF INFECTION!**
4. Before operating the hydraulics, lower the machine to firm ground.
Relieve the hydraulics, stop the motor and remove the ignition key.
5. Check the hydraulic hoses on a regular basis, however, every six months as a minimum due to any cracks, wear and tear, etc. Replace any defective hoses immediately.

The life of hydraulic hoses is maximum 5 years.

New hydraulic hoses must meet the manufacturer's requirements.

INSTRUCTIONS ON TRANSPORT ON THE PUBLIC ROADS:

Check before transport on public roads that the attachment of the machine at the tractor is in accordance with the local rules and regulations in force (permitted total weight, permitted axle load, transport width, lights, warning signs, etc.).

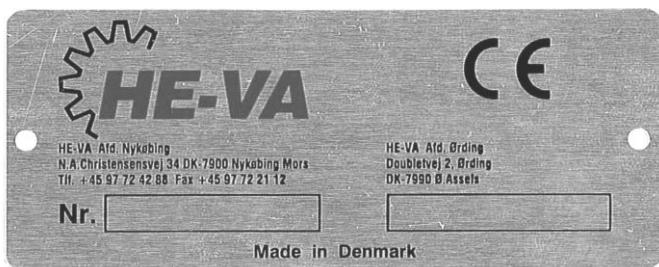

FRONT AXLE LOAD:

After the attachment of the machine and at maximum load, the driving properties of the tractor must be ensured. Check that the front axle is sufficiently loaded. As a minimum, the front axle load must be 20% of the tractor weight. Permitted axle load and permitted total weight for the tractor must always be observed.

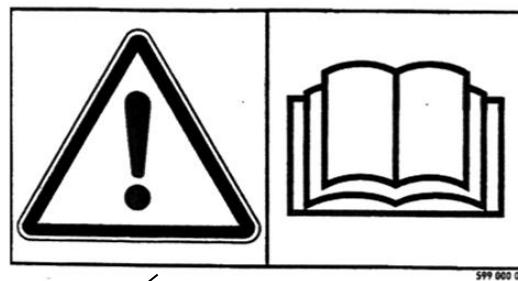

NB! The driving, controlling and braking properties are affected by the attached machine combination.

Labels on the machine

You will find several labels on your machine containing **safety** and practical instructions as regards the correct application of the machine. Please study the instructions and point out to the user the importance of the labels as well as the **safety instructions** in the Operating Instructions. Always keep the labels clean and readable – if not they must be replaced.

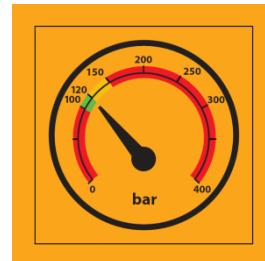

A

B

C

D

Explanation of the machine labels

- A** Plate with number and year of manufacture.
- B** Study the Operating Instructions thoroughly before any operation of the machine and observe all safety instructions.
- C** Tighten up all bolts regularly. If this is not performed, our guarantee obligations will no longer apply.
- D** Correct hydraulic pressure on the release system.

Start-up of the machine

General information

The machine requires 1 double acting outlet (rigid).

The machine requires 2 double acting outlets (hydraulic).

The hoses for depth adjustment are provided with **red** cable straps.

Attachment and uncoupling (rigid machines)

1. Under normal circumstances attach the tractor in the lowest lifting points of the machine both as regards the lifting arms and the top link.
2. When the machine is to be parked and uncoupled from the tractor, it is important, that the roller is placed in the lowest position, so that the machine is placed stably.
3. When uncoupling, relieve the tractor's oil outlet, and the machine's quick couplings can be uncoupled without pressure. The hydraulic cylinder which controls the roller is equipped with a pilot-controlled check valve which hermetically cuts off the oil for the hydraulic cylinder, meaning that it is locked in the chosen position regardless of the tightness of the quick couplings.

Attachment and uncoupling (hydr. machines)

1. Be aware that the machine is to be attached und uncoupled to the tractor in transport position.
2. The roller has to be placed in the lowest position otherwise problems might occur during the folding.

From transport to working position:

3. The machine is to be raised to max. transport height.
4. The depth adjusting cylinder is placed at the top.
5. Now unfold the wing sections.
6. Adjust the working depth.

From working to transport position:

7. Raise the machine to max. transport height.
8. The depth adjusting cylinder (the roller) is placed at the top.
9. Now the wing sections are folded together into transport position. **⚠** Be sure that the locking claws lock the wing sections.

Settings and adjustment

Stone protection

Quick-Push shear bolt.

When the shear bolt is broken and the tine has been released, place the shear bolt one notch forward before the machine can operate again.

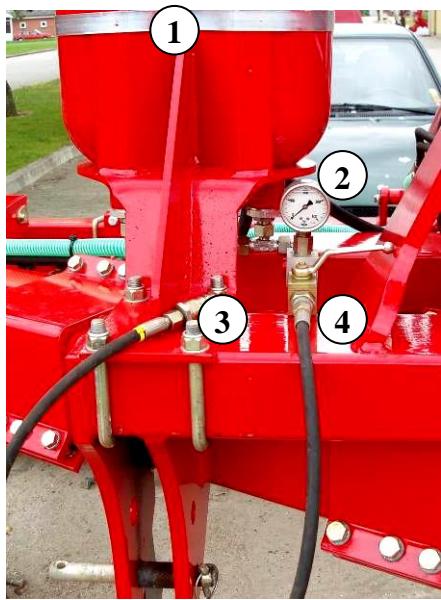

- 1 Pull out the R-clip (Pos. 1).
- 2 Pull the tine back to normal working position (Pos. 2).
- 3 Push the shear bolt (Pos. 3) **one** notch forward to a new position in the tine. Do not push the bolt totally through (it can be necessary to remove soil etc. from the hole in the tine).
⚠ Important: All activities under the machine are deprecated when the shear bolt is being moved or changed.
- 4 Push back the R-clip (Pos. 1), so that it locks the shear bolt in its place, and the machine is ready for operation.

When the shear bolt is broken for the eighth time, it is used up. Be aware that the shear bolt must **never** be shorter than 65 mm.

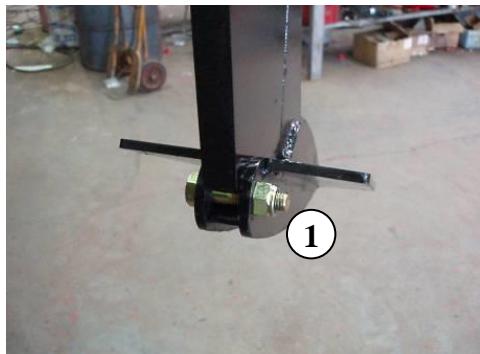

When a new shear bolt is mounted it is important that it is placed rightly. The end of 40 mm (Pos. 3) is to turn away from the tine.

Hydraulic automatic release system.

- 1 Before each season it has to be controlled, that the gas pressure in the accumulator (Pos.1) is 90 bars. **⚠** This requires special tools and can only be performed by an authorized dealer.
- 2 Before the start-up of the machine the hydraulic pressure in the closed hydraulic stone protection system has to be controlled on the machine's pressure gauge (Pos. 2). The pressure has to be **minimum 100 bar** and must not exceed 160 bar.
- 3 **IMPORTANT** – the hydraulic pressure is to be controlled continuously and must never be under 100 bar.
- 4 If there is a need to adjust the working pressure, follow the below instructions:
 - a Mount the quick coupling of the hydraulic hose (Pos. 3) in the tractor's oil outlet.
 - b Turn on the ball valve (Pos. 4), and the working pressure can now be adjusted up or down with the tractor's oil outlet.
 - c When the desired pressure is achieved, turn off the ball valve again (Pos. 4), and the tractor's hydraulic system is relieved before the quick coupling (Pos. 3) is dismounted and placed in the parking device of the machine.
- 5 During the operation of the machine the tine is swinging automatically to the rear if it meets an obstacle. In normal circumstances the tine will automatically return to the working position again after having passed the obstacle. At extreme obstacles and/or soil conditions it might be necessary to stop and eventually lift the machine from the soil. **⚠** It is important that no persons are near to the machine as the tine is returning to the working position with high speed and might throw with soil and stones.

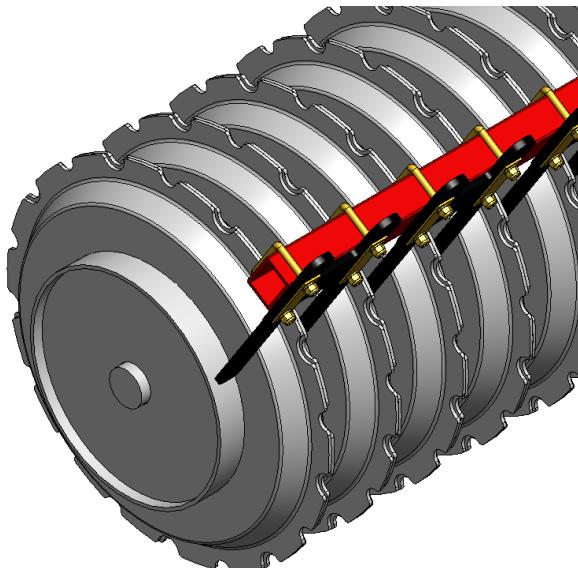

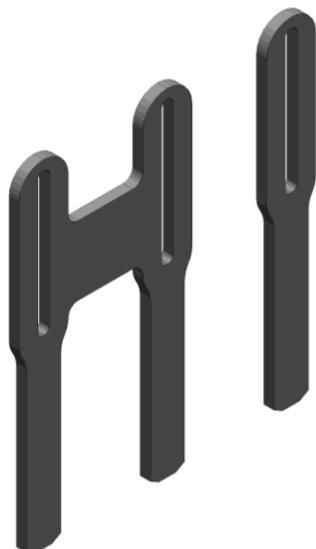

Replacement of wearing point

1. \triangle Before working with the machine's wearing points, the machine is to be fastened. This can be performed by trestles under the main frame or by a support of the roller.
2. Dismount M16x65 mm bolt (Pos. 1) by means of 2 pcs. 24 mm spanners. \triangle The wearing point might fall off, when the bolt is removed – take care of foot and leg injuries.
3. Dismount the wearing point by pushing it forward. This might be difficult due to entrance of soil, and it might be a good idea to use a hammer.
4. Mount the new wearing point, item no. 645000044 (Pos. 2), by pushing the wearing point to the rear and then in its place.
5. Check the M16 x 65 mm bolt for eventual damages and replace it as required, item no. 690103190 + 690113008.
6. Mount the M16 x 65 mm bolt (Pos. 1), lubricate and tighten it with 25 Nm.

Scraper

The Sub-Tiller has special designed scrapers among the packer rings on the V-profile roller. To avoid unnecessary wear and to obtain the best scraper effect it is important to check the centering of the scrapers every day

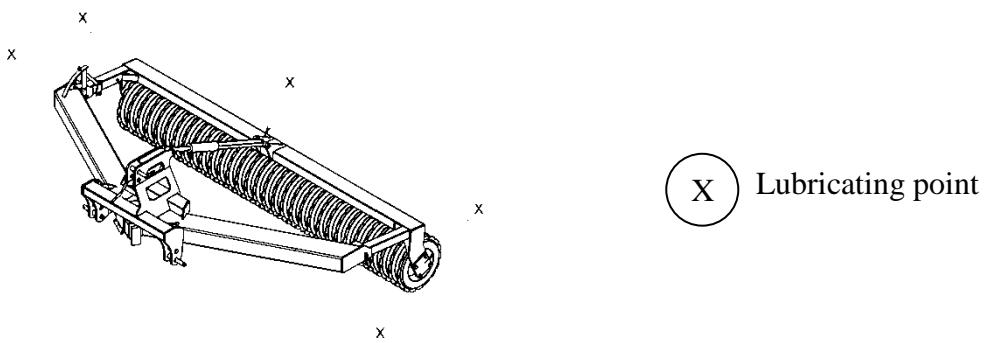

Maintenance

- After 10 hours of operation, retighten the machine. Check hydraulic hoses, fittings and cylinders for leaks and retighten.
- Further check on a regular basis that all bolts are tightened.
- Before the winter storage, wash and lubricate the machine. If you use high-pressure cleaner, do not spray directly on the ball bearings. After the washing, you may spray the machine with oil.

Lubrication

For lubrication, maintenance and repair, lower the Sub-Tiller, put the brakes of the tractor on and stop the motor.

The 2.5 – 4.0 m Sub-Tiller (rigid) have five lubricating points and the 4.0 – 5.0 m Sub-Tiller (hydraulic) have 20 lubricating points - all Sub-Tillers must be lubricated after every 30 working hours as well as after the cleaning in order to press out any water and dirt. The lubricating points on the rigid machines are located where the bar is mounted on the frame as well as at ball bearings and cylinders. The lubrication points on the hydraulic machines are furthermore located where the wing sections are hinged on the middle section and at the locking mechanism of the wing sections on the middle section.

Moreover, the machines with hydraulic automatic release system have 2 lubricating points per tine which are to be lubricated after 10 hours of operation.

Attention!

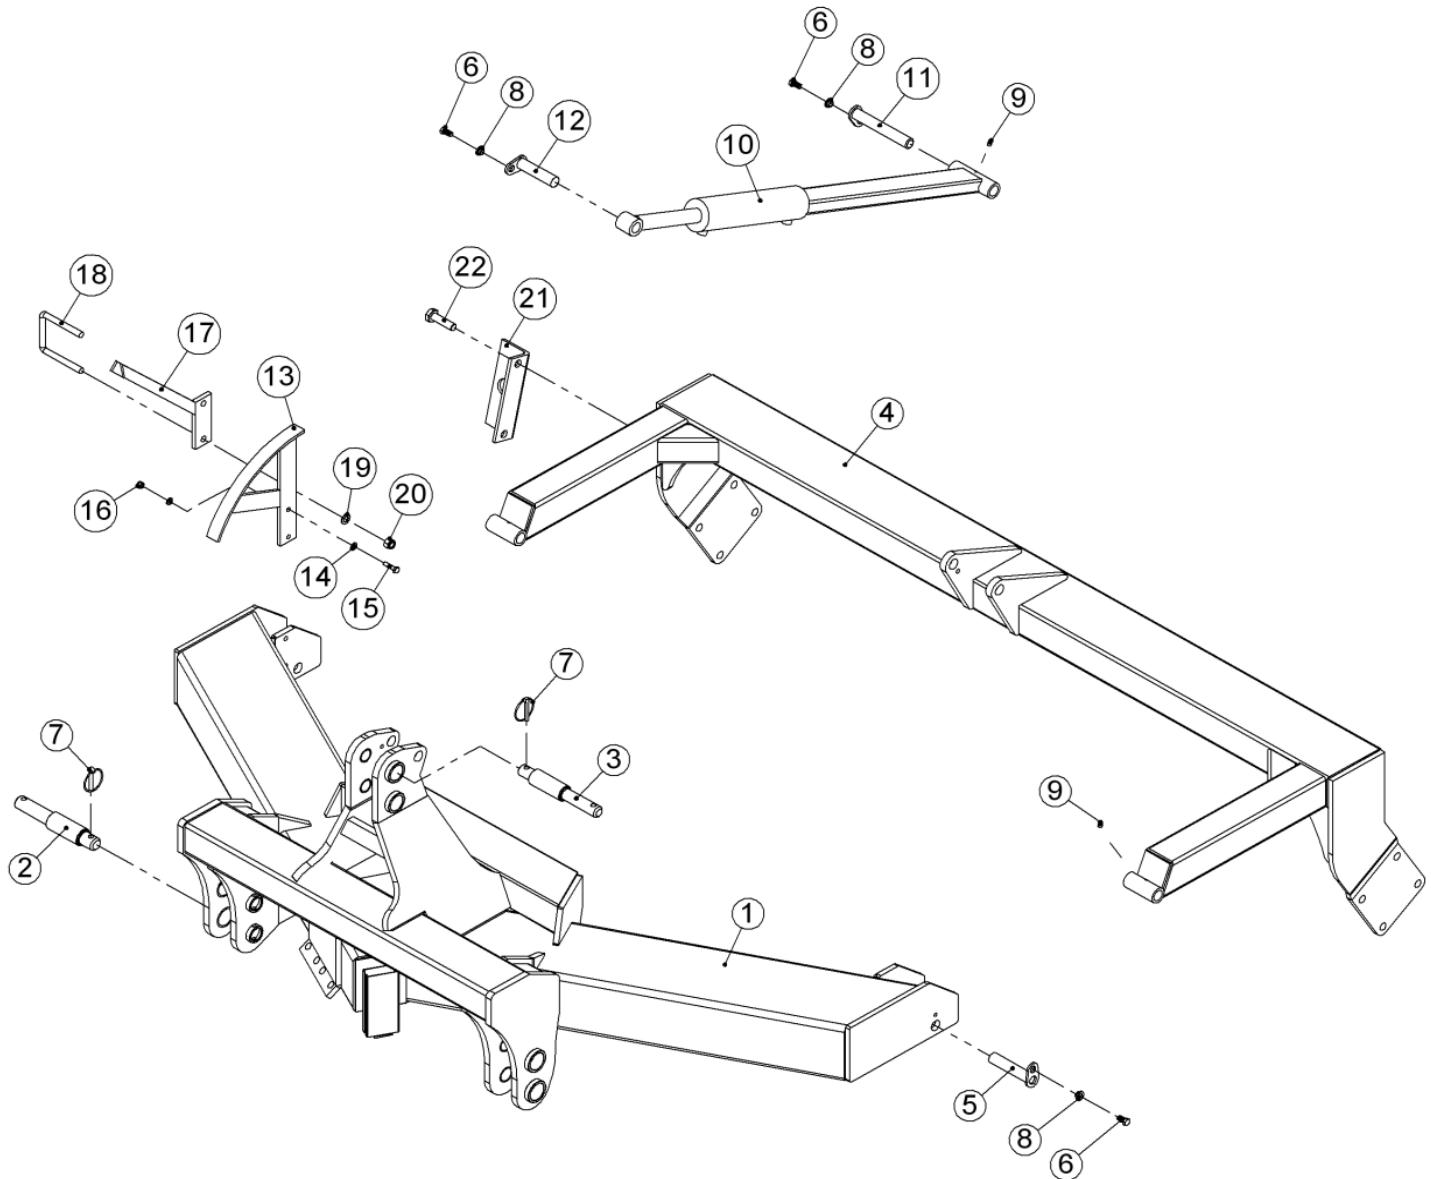

However, the double-sealed ball bearings in the roller should only be lubricated every 20 working hours and by 1-2 strokes so that the sealing rings are not pressed out.

Important!

Oil, type Hydro Texaco HD32 has been filled in the hydraulic system.

38	1139500	Cable bracket, mounted on the roller frame	1
39	0235460	Steel bolt M12x100 8.8	1
40	645000337	Cable bracket	1
41	645000380	Cable bracket, mounted on the main frame	1
42	645000372	Cable bracket	1
43	645000420	Extension for hose bracket	1
44	0235830	Steel bolt M16x55 8.8	2

Attention:

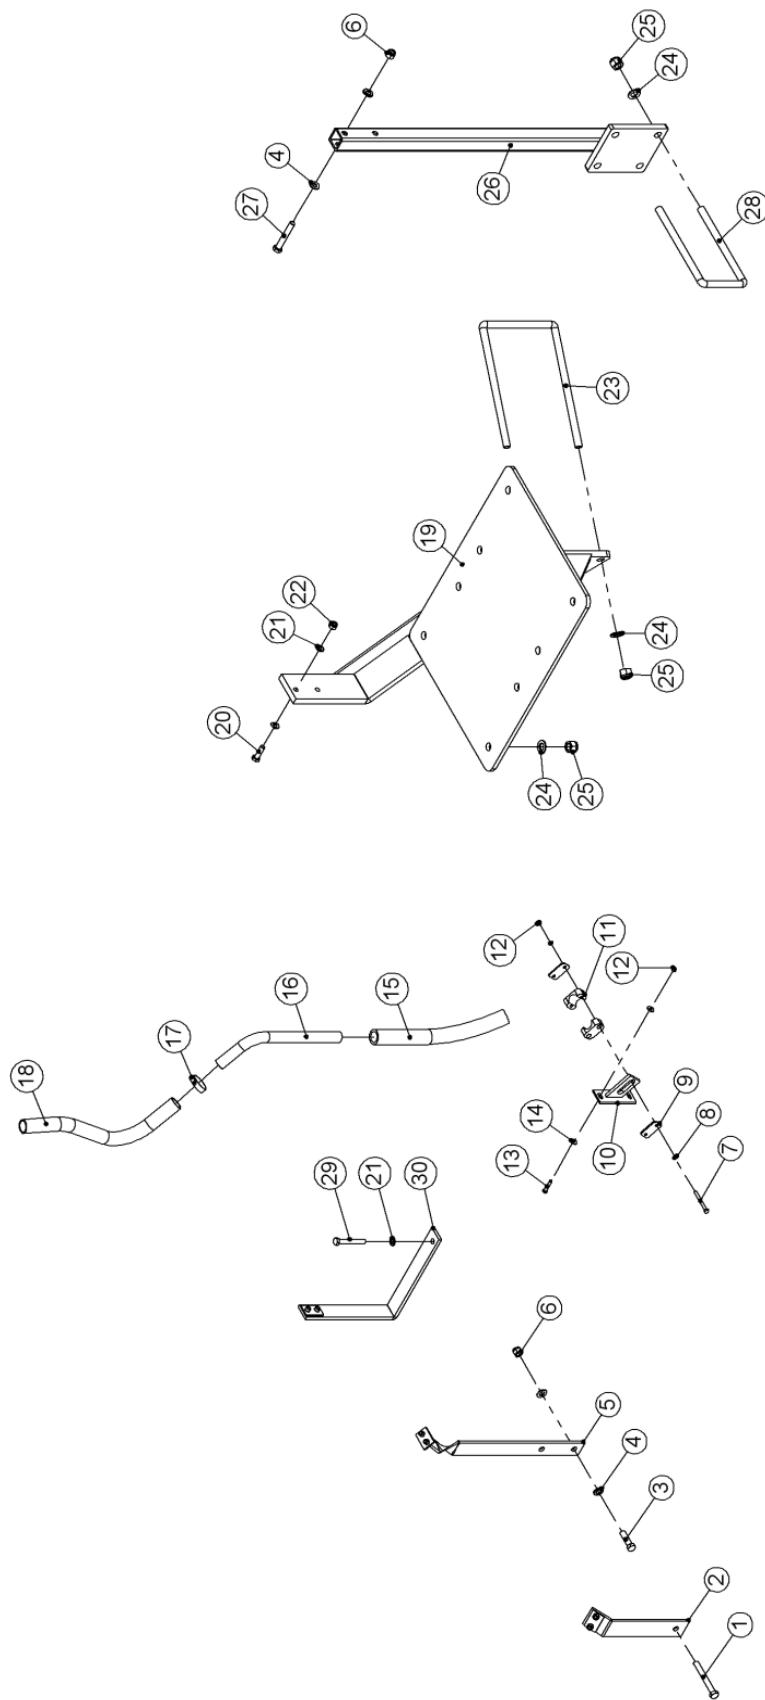

The number of hoses and hose lengths can vary - dependent on the machine type, therefore check measurements and number before ordering the spare parts.

Multi-Seeder

If the Sub-Tiller is mounted with HE-VA Multi-Seeder, we refer you to the separate Multi-Seeder Manual with spare part list.

19	690201448	Hydraulic hose 1150 mm $\frac{1}{2}$ " st/45°	2
20	690201430	Hydraulic hose 590 mm $\frac{1}{2}$ " st/45°	0-9
21	690201414	Hydraulic hose 400 mm $\frac{1}{2}$ " st/st	0-1
22	690204507	Fitting T15	0-7
23	690206002	Filter plug $\frac{1}{2}$ " (until masnr. 27671)	2-7
23	0446350	Fitting (from masnr. 27710)	2-7
23a	0487590	PvC hose (from masnr. 27710)	2-7
23b	0230290	Taptite (from masnr. 27710)	2-7
23c	0449310	Rubber suspension (from masnr. 27710)	2-7
24	690204512	Fitting straight Ø15x $\frac{1}{2}$ "	2-7
25	690200305	Cylinder 110/50x165 w/yoke (until masnr. 27671)	2-7
25	0467400	Cylinder 110/50x165 w/yoke (from masnr. 27710)	2-7
26	0449110	Bounded seal 1 $\frac{1}{4}$ "	2
27	0454183	Hydraulic hose 600 mm $\frac{1}{2}$ " st/st	2

Attention:

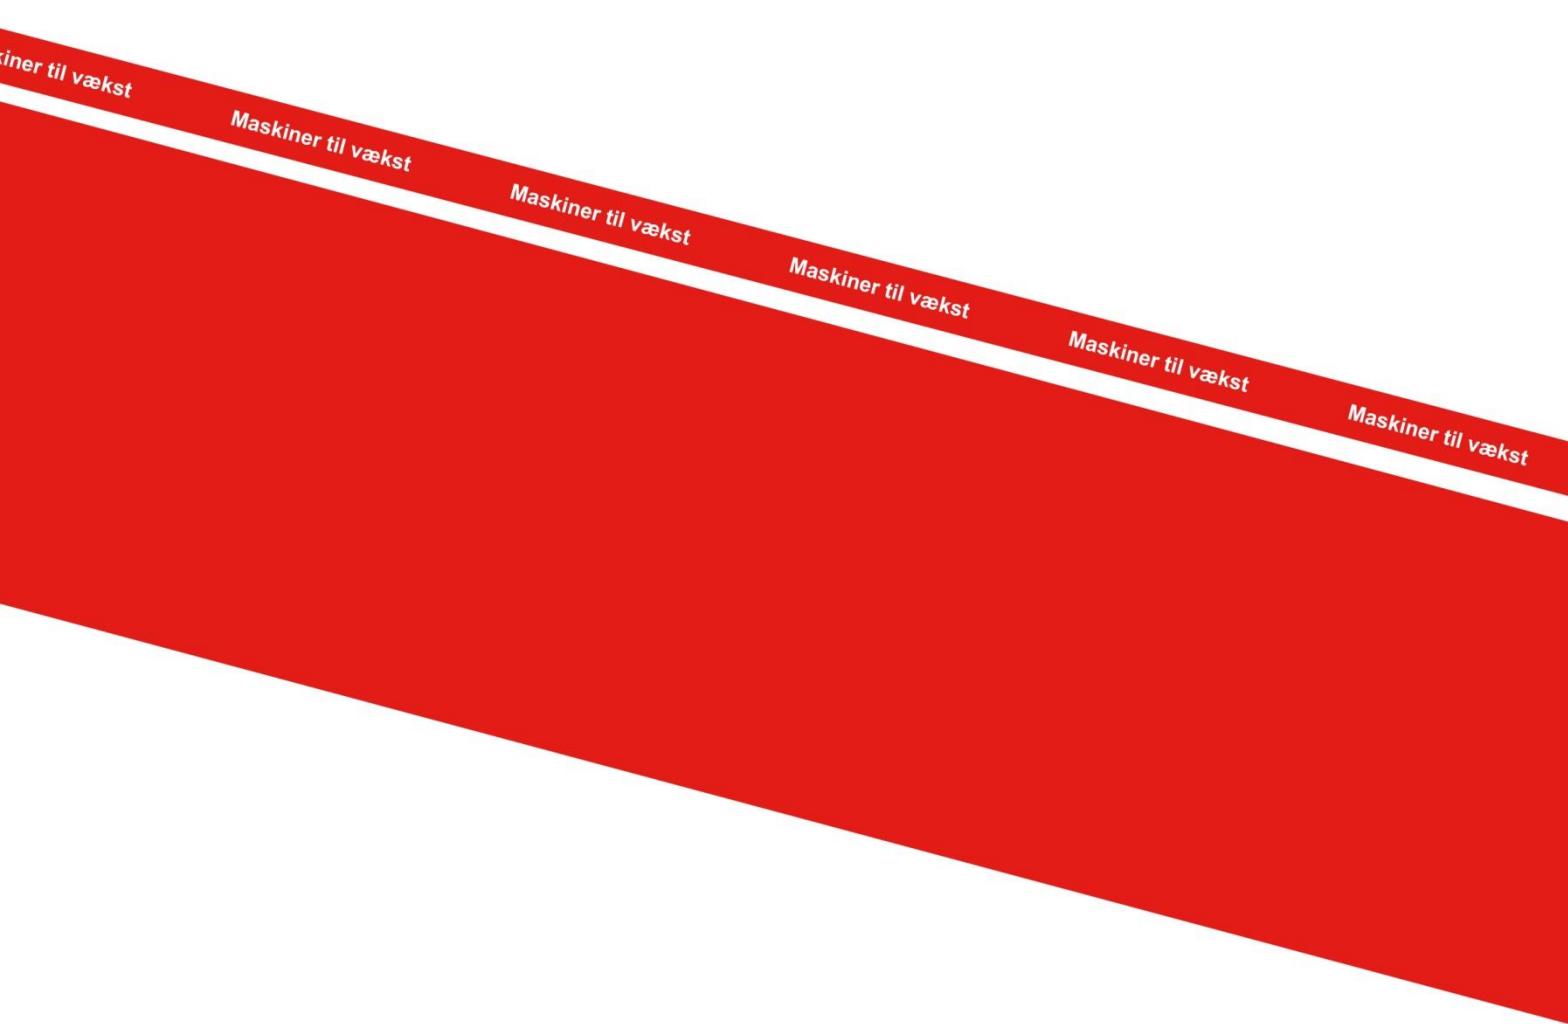

The number of hoses and hose lengths can vary – dependent on the machine type, therefore check measurements and number before ordering the spare parts.

Hydraulics for automatic release system (hydraulic)

Pos.	Item no.	Designation	4m. 7 tines	5m. 7 tines	5m. 9 tines
