

# ***HE-VA Top-Strigle***

***Quick & effective germination of weed seeds***

**HE-VA**  
TOP-STRIGLE

## Grassland

The Top-Strigle freshens up the field after the winter season, where it levels and breaks up the surface to allow oxygen to get to the root zone and helps to create tilth to make the seed germinate.

## Stubble & straw

After harvest, the Top-Strigle spreads the left-over straw and by lying straw to sunlight, the germination process will be accelerated. This creates optimum conditions for direct drilling.

## Multiple tasks in one operation

Save time and fuel costs by combining separate processes into one.

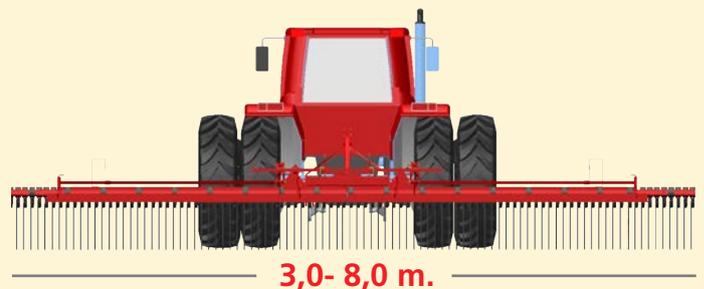

For intensive levelling of grassfields, an optional levelling board can be fitted on 2- and 4-row models and is fully adjustable.

Combine the Top-Strigle with a Multi-Seeder and be able to do direct tilling at the same time as creating a quick and effective germination of weed seed.

## Technical specifications

	Front mounted	Rear mounted
2-row models	x	x
4-row models	x	x
5-row models	-	x
