EC DECLARATION OF CONFORMITY

in accordance with the EU Machinery Directive 2006/42/EC
applicable as from December 29th 2009:

HE-VA ApS
N. A. Christensensvej 34,
DK-7900 Nykøbing Mors

The declaration comprises the following machines:

Vip-Roller NG 4,5m – 5,4m – 6,3m – 7,3m – 8,2m

Nykøbing the 29th of December 2018

Villy Christiansen

The undersigned is furthermore authorised to compile technical documentation for the above machine.

1. Description of the machine

The Vip-Roller is a 3-sectioned hydraulic, wheel mounted roller. Vip-Roller is to be used for packing the top soil, to maintain the content of moisture in it, and to eliminate not solid stones from the surface of the cultivated area.

The roller sections has an independent suspension, which gives the sections a perfect adaption to the ground in uneven areas. The changing between transport- and work position is by hydraulic force. The roller has a low and compact transport position with a width of 2,4 meters.

Read the manual before operating the roller and strictly follow the safety instructions.

2. Delivery Check

Check the roller for any damages. Check the hydraulic hoses for cuts and squeezing damages. Check also the other hydraulic components, are not damaged during transport. Check that the frame construction has not been damaged. You should also check that the roller blocks have not been exposed to impacts, which may have damaged the cast roller rings or the double-sealed ball bearings.

Finally check that the transport wheels are tightened and OK.

Check the air pressure in the tyres: approx. 3.8 bar / 55 psi

Instructions for unloading and final assembly

In order to minimize the roller's space during transport, the roller is supplied partially separated from the factory. If the machine is delivered unassembled, it must therefore be completely installed first.

Transport Brackets

At delivery the machine is mounted with brackets for hoisting gear, which is not painted.

These brackets is for attachment of chains or straps, when loading or unloading the machine from the transport vehicle, and they must be dismantled before use.

3. Specifications

3-section hydraulic wheel-mounted field roller with free movability in all sections. Used for rolling of stones and packing of the top soil. The roller is available with a working width of 5.4 m or 6.3 m and with three different ring types: Cambridge-, Cam-, Star-, 2D wave-, and Crosskill rings.

Technical Specifications

Work Width	4,5 m	5,4 m	6,3m	7,3 m	8,2m
Total Width (unfolded)	4,8 m	5,7 m	6,6 m	7,6 m	8,2 m
Length	4,2 m	4,2 m	4,7 m	4,7 m	4,7 m
Width in transportposition	2,45 m	2,45 m	2,45 m	2,45 m	2,45 m
Hight in transportposition	2,2 m	2,2 m	1,6 m	1,6 m	1,6 m
Pressure on towing eye in transport position (% of total weight)	ca. 40 %	ca. 40 %	ca. 40 %	ca. 40%	ca. 40%
Wheel assembly, standard	10.0/75x15.3 – 10 PLY	10.0/75x15.3 – 10 PLY	11.5/80x15.3 - 14 PLY	11.5/80x15.3 - 14 PLY	11.5/80x15.3 - 14 PLY
Tyre pressure	3,8 bar / 55 psi				
Oil pressure	min. 150 bar				
Hydraulic outlets	1 single-acting and 1 double-acting				
Quick-couplings, standard	Sterling type E 402				
Hydraulic oil	Hydro Texaco HD32				

4. Operating Instructions

Attachment

On delivery, the roller is in transport position. When the roller is attached, check that the towing hook height is 400-500 mm. Reverse the tractor, put in and **secure** the draw bolt.

Raise the support leg and place it in the transport fittings on top of the drawbar. The roller requires one double-acting and one single-acting hydraulic outlet.

Now connect the hydraulic hoses, in the hydraulic outlets of the tractor.

IMPORTANT: Check that the male end, mounted by the factory, fits the female end of the tractor.

Now pressurise the tip cylinder so that the side sections are tipped free of the transport fittings. Then the side sections, are turned out by means of the wing cylinder.

Now the roller is hydraulically tipped into working position by means of the tip cylinder.

Transport

At changeover for transport, the roller is tipped totally backward by pressurising the tip cylinder. Now pressurise the wing cylinder so that the side sections turn forward, towards the stop on the transport fittings of the tail.

When both sides lie in parallel with the tail, they are lowered down into the transport fittings by releasing the pressure of the tipping cylinder.

Now relieve the hydraulics totally, and the roller is ready for transport.

When rolling

Speed: max. 10 km/h.

When turning, drive in wide curves as far as possible. The turning should be performed no sharper, than all roller rings are still rotating forward.

Only lower the wheels when making ready for transport position.

Do not drive over any large stones, which are not moveable.

5. Safety at the Vip-Roller NG

Do not operate the machine, if any people** are at risk in the dangerous area.*

When persons are at risk in the dangerous area (e.g. when doing adjustments, maintenance or connect or disconnecting), the following points must be met:

1. Lower the machine on solid ground.
2. Hydraulic must be relieved.
3. Tractor must be turned off, and the key removed.
4. Driver must be aware of, when operating that there is no persons at risk in the dangerous area.

* **Dangerous area: At the machine and underneath it, and in a distance of 4 m from it.**

** **People at risk: Any person, who is completely or partially in the dangerous area.**

Most accidents when operating the machine, transporting and doing maintenance occurs, when avoiding the most simple safety regulations.

For this reason, it is of highest importance, that any person who is operating the machine, strictly follows the safety regulations and other instructions, which belongs the machine.

The machine must only be operated, maintained and fixed by persons, who is confidential with and skilled for this work and is aware of moments of danger, which can occur.

Controle tightening:

- of hub bolts, 386 Nm according to specifications
- flange for towing eye, **6 pc of bolts** 541 Nm

ATTENTION!! Rotating parts and loose in a loose condition, is a dangerous combination.

IMPORTANT!! It is strictly prohibited for any person to take place on the frame of the machine, when it is either operating or the tractor is idling.

6. Safety Instructions, regarding Hydraulic System

1. The highest allowable pressure, is 225 bar.
2. It is recommended to mark the hydraulic connections between the implement and tractor, to avoid incorrect operation!
3. When checking for hydraulic leaks, suitable safety gear must be used due to danger. (Safety goggles , gloves, etc.)
At high pressure, Hydraulic oil can penetrate the skin and course serious injuries.
At injuries, consult a doctor immediately. **RISK OF INFECTION!**
4. Before any work at the hydraulic system, the implement must be lowered to solid ground.
Pressure must be relieved, engine stopped, and ignition key removed.
5. Check the hydraulic hoses on a regular basis, however, every six months as a minimum due to any cracks, wear and tear, etc. Replace any defective hoses immediately.
6. Hydraulic hoses lasts for no more than 5 years.
New hydraulic hoses must be identical to the manufacturers specifications.

Oil, type Hydro Texaco HD 32 has been filled in the hydraulic system
--

INSTRUCTIONS FOR TRANSPORT AT PUBLIC ROADS:

Before transport at public roads, make sure that the attachment of the implement to the tractor, is in accordance with the local rules and regulations in force (permitted total weight, permitted axel load, transport width, lights and warning signs).

FRONT AXEL LOAD:

When the implement is attached and at maximum load, the tractors driving properties must be ensured. Check that the front axel is sufficiently loaded. The front axel load must be at least 20% of the tractors weight. Permitted axel load and total weight for the tractor must be respected.

NB! The driving, controlling and braking properties are affected by the attached implement.

7. Markings on the machine

Several markings are located at your machine, which contains **safety regulations** and other instructions to inform about correct operating.

Please read these instructions carefully, and make the driver aware about the markings and **safety regulations** in this Operating Instructions. Keep the markings clean and readable. If they are not, they must be replaced.

Safety – and other markings on the machine

Study the Operating Instructions thoroughly before any operation of the machine and observe all safety instructions.

Item number: 1305028

Take care that no persons are within the machine's hazardous area during the unfolding and folding procedure.

Item number: 1305029

Plate with number and year of manufacture.

Indication Labels for the machine's hydraulic systems:

Item number: 1305031

Tighten up the bolts regularly. If this is not performed, our warranty obligations will no longer apply.

Item number: 1305030

8. Maintenance

- After 10 hours of operation, tightening of wheels, bearings and stop rings must be done.
- Hoses, fittings and cylinders must be checked for any leaks and retightened.
- When the season is done the roller must be cleaned, lubricated and a thin layer of oil sprayed on all painted parts.
- Glossy piston rods must be protected by grease.

Lubrication

At every 10 hours operation: - every roller sections suspension

At every 30 hours operation: - wings bushings hinged to wheel frame
- bearings
- cylinders
- wheel frame bushings hinged to chassis

Once a year: - the support leg

IMPORTANT

Bearings must only be lubricated with 1-2 strokes, otherwise the sealing rings can be released.

X= grease nipples

Hjulbolt M18x1,5 fine thread		433 Nm	
Hjulbolt M22x1,5 fine thread		803 Nm	

9. Disposal

When, after many years of use, the machine is to be regarded as end-of-life, it must be disposed of to a registered and approved product dealer. This will carry out the statutory discharge and disposal of hydraulic oil, as well as sorting materials for further processing for recycling.
