EC DECLARATION OF CONFORMITY

in accordance with the EU Machinery Directive 2006/42/EC
applicable as from December 29th 2009:

HE-VA ApS
N. A. Christensensvej 34,
DK-7900 Nykøbing Mors

hereby confirms that the following machine has been manufactured in accordance with the Council
Directive 2006/42/EC.

The declaration comprises the following machines:

Top-Cutter Solo
3.0m – 3.5 – 4.0 m rigid
4.0m – 5.0 – 6.0m hydraulic foldable

A handwritten signature in blue ink, appearing to read 'Villy Christiansen', is positioned above the printed name.

Nykøbing the 28th february 2021 Villy Christiansen

The undersigned is furthermore authorised to compile technical documentation for the above machine.

Delivery Check

Check the Top-Cutter for any damage when it is received at either the dealer and the final customer. Check that the frame construction has not been exposed to impacts.

Check the hydraulic hoses, at hydraulic models, for cuts and squeezing damages. Check also the other hydraulic components, are not damaged during transport.

Machine description

The Top-Cutter is either a rigid or a hydraulic foldable model as a 3-section construction.

The machine can be delivered as a Single or Twin model roller. When Twin roller model the knives are mirrored between front and rear roller, to make a cross pattern at the surface.

The machine is delivered as a front mounted model, and as accessories an A-frame for rear mounting is available.

Additional equipment:

- A-frame for rear mounting at either rigid or hydraulic models
- Weight plates of 30 kg each. Maximum of 3 pc per meter working width
- LED-marker light
- LED-lights for rear mounted models
- 2 pc. of reflex boards
- Material damper Guard

Technical specifications

Working width	Type	Single/Twin	Transport width	Weight kg
3,0m	Rigid	Single	3030	700
		Twin	3030	990
3,5m	Rigid	Single	3490	780
		Twin	3490	1.043
4,0m	Rigid	Single	4020	890
		Twin	4020	1.180
	Hydraulic	Single	2750	1.250
		Twin	2750	1.620
5,0m	Hydraulic	Single	2750	1.360
		Twin	2750	1.810
6,0m	Hydraulic	Single	2750	1.650
		Twin	2750	2.050

Oil pressure	Minimum 170 bar
Hydraulic outlets	1 double acting
Quick couplings, standard	Sterling type E 402
Hydraulic oil: The machine is filled with	Hydro Texaco HD32 Specification DIN 51524-3 / ISO 11158 L-HV

Working with the Top-Cutter Solo

The area must be dry and firm to achieve the best result. Drive around wet spots where the machine sinks and works unintentionally.

If the shape of the field allows it, it is recommended to try to drive with, for example, a 20° - 35 ° angle on the direction of travel to achieve a better effect.

The speed to be driven should be between 10 - 18 km / h. For solid stones, the speed must be reduced and possibly lift the machine.

Avoid driving over deep tracks in the field that are perpendicular to the direction of travel, with the Top-Cutter lowered.

On hydraulic models, the ball valves on the folding cylinders must always be closed when the machine is in the transport position.

The tractor's lift arms **must always** be in the float position while driving. Do not transfer weight from the tractor to the Top-Cutter.

The machine support legs **must always** be used when the machine is disconnected. The machine can stand without support legs but is unstable and can tip over with a slight impact.

Important: When the machine is unfolded, the oil pressure in working position on the machine's manometer must not exceed 60 - 80 bar.

The 3 parts of the machine must be able to move independently of each other while driving. If the machine becomes completely stiff, the pressure must be reduced.

Safety around the Top-Cutter Solo

Do not operate the machine, if any **people**¹ are at risk in the **dangerous area**.²

When persons are at risk in the dangerous area (e.g. when doing adjustments, maintenance or connect or disconnecting), the following points must be met:

- Lower the machine on solid ground.
- Hydraulics must be relieved.
- Tractor must be turned off, and the key removed.
- Driver must be aware, when operating that there is no persons at risk in the dangerous area.
- When replacing knives, it is not aloud to work underneath the machine without any rigid support which are approved for the purpose. As an alternative the machine can be tilt around to stand on the A-frame and fixed in this position.

Most accidents when operating the machine, transporting and doing maintenance occurs, when avoiding the simplest safety regulations.

For this reason, it is of highest importance, that any person who is operating the machine, strictly follows the safety regulations and other instructions, which belongs the machine.

The machine must only be operated, maintained and fixed by persons, who is confident with and skilled for this work and is aware of moments of danger, which can occur.

ATTENTION!! Rotating parts and clothes in a loose condition, is a dangerous combination.

IMPORTANT!! It is strictly prohibited for any person to stand on the frame or chassis of the machine, when it is either operating or the tractor is idling.

Instructions for transport on public roads:

Before transport on public roads, make sure that the attachment of the implement to the tractor, is in accordance with the local rules and regulations in force (permitted total weight, permitted axle load, transport width, lights and warning signs).

Front axle load:

When the implement is attached and at maximum load, the tractors driving properties must be ensured. Check that the front axle is sufficiently loaded. The front axle load must be at least 20% of the tractors weight. Permitted axle load and total weight for the tractor must be respected.

NB! The driving, controlling and braking properties are affected by the attached implement.

¹ People at risk: Any person, who is completely or partially in the dangerous area.

² Dangerous area: At the machine and underneath it, and in a distance of 4 m from it.

Safety Instructions, regarding Hydraulic System

- The highest allowable pressure, is 225 bar.
- It is recommended to mark the hydraulic connections between the implement and tractor, to avoid incorrect operation!
- When checking for hydraulic leaks, suitable safety gear must be used due to danger. (Safety, goggles, gloves, etc.)
At high pressure, hydraulic oil can penetrate the skin and cause serious injuries.
In case of injuries, seek medical attention immediately. **DANGER OF INFECTION!**
- Before any work at the hydraulic system, the implement must be lowered to solid ground. Pressure must be relieved, engine stopped, and ignition key removed.
- Check the hydraulic hoses on a regular basis, however, every six months as a minimum due to any cracks, wear and tear, etc. Replace any defective hoses immediately.
- Hydraulic hoses lasts for no more than 5 years.
New hydraulic hoses must be identical to the manufacturers specifications.

Markings on the machine

Several markings are located on your machine, which contains **safety regulations** and other instructions to inform about correct operating.

Please read these instructions carefully, and make the driver aware about the markings and **safety regulations** in this Operating Instructions. Keep the markings clean and readable. If they are not, they must be replaced.

Safety and other markings on the machine

Study the Operating Instructions thoroughly before any operation of the machine and observe all safety instructions.

Plate with number and year of manufacture.

Warning instruction

Take care that no persons are within the machine's hazardous area during the unfolding and folding procedure.

Maintenance

After 10 hours of operation, tightening of wheels, bearings and stop rings must be done. If this is not respected our warranty will lapse.

Maximum torque according to ISO 898-1 in Nm. With lubricated thread			
Metric thread	Quality 8.8	Quality 10.9	Quality 12.9
M10x1,5	47	65	79
M12x1,75	81	114	136
M14x2,0	128	181	217
M16x2,0	197	277	333
M18x2,5	275	386	463
M20x2,5	385	541	649
M22x2,5	518	728	874
M24x3,0	665	935	1120
Hub bolts M18x1,5 fine thread		385 Nm	
Hub bolts M22x1,5 fine thread		550 Nm	

Eventually damages at the paint must be repaired at least once in the season. This will preserve and make the machine stay in a good condition for many years.

- On foldable models the cylinder bushings and hinge joints must be greased at every 20 hour of operating
- Bearings at the rollers twice a year and after every machine wash.

Disposal

When, after many years of use, the machine is to be regarded as end-of-life, it must be disposed of to a registered and approved product dealer. This will carry out the statutory discharge and disposal of hydraulic oil, as well as sorting materials for further processing for recycling.
